

MEDIA RELEASE

EXCO SHAREHOLDERS APPROVE XSTRATA COPPER'S ACQUISITION OF ADVANCED COPPER PROJECTS IN NORTH WEST QUEENSLAND

Brisbane, 9 June 2011

Xstrata Copper welcomes the outcome of the Exco Resources Ltd shareholder meeting today, at which the sale of the E1 and Monakoff copper tenements in north west Queensland, Australia to Xstrata Copper for a cash purchase price of AUD175 million was approved. It is anticipated that the acquisition agreement with Exco Resources Ltd will be completed over the next month following government and other approvals.

The E1 and Monakoff copper tenements are strategically located close to Xstrata Copper's Ernest Henry Mine and contain open pit copper mineral resources with completed feasibility studies. Ore from the projects will be transported to Ernest Henry Mine and processed through that operation's existing concentrator. It is anticipated these two new projects will increase Ernest Henry Mine's production profile from the second half of 2012, including gold by-product credits.

Xstrata Copper North Queensland Chief Operating Officer, Steve de Kruijff said these projects will strengthen the viability of our Ernest Henry Mine operations in Cloncurry, along with the benefits those operations deliver to the local community.

"Exco shareholder approval is a significant step towards integrating the development of these projects into our north Queensland business plan," said Mr de Kruijff.

"We anticipate the development and operation of the E1 and Monakoff copper projects will create around 100 full-time jobs, some of which will be sourced from Ernest Henry Mine's existing open pit workforce.

"This is in addition to the jobs already created in the transformation of Ernest Henry Mine's open pit operations to a major underground mine and associated magnetite extraction plant.

"Transforming our Ernest Henry operations to an underground mine involves 330 jobs during construction and provides 400 long term job opportunities from 2013.

"The E1 and Monakoff copper projects will expand Ernest Henry Mine's expected production profile by utilising the remaining capacity of the Ernest Henry concentrator while leveraging other significant synergies available through our existing site infrastructure, equipment and workforce.

“Subject to completing the acquisition and finalising the necessary government and other approvals, we expect initial production from the E1 and Monakoff copper projects to commence in the second half of 2012.

“We will continue to work closely with landowners as we finalise planning requirements and develop these tenements into operations.”

The E1 and Monakoff deposits have a combined JORC compliant resource of 52.1 million tonnes grading 0.77% copper and 0.23g/t gold at a cut-off grade of 0.3% copper for E1 and 0.5% copper for Monakoff.¹ This represents 401,000 tonnes of contained copper metal and 384,000 ounces of contained gold metal.

The E1 and Monakoff tenements are located 8 kilometres east and 21 kilometres south respectively of the Ernest Henry Mining operation.

ABOUT XSTRATA PLC

Xstrata is a global diversified mining group, listed on the London and Swiss Stock Exchanges. Headquartered in Zug, Switzerland, Xstrata maintains a meaningful position in seven major international commodity markets: copper, coking coal, thermal coal, ferrochrome, nickel, vanadium and zinc with additional exposure to gold, cobalt, lead and silver. The Xstrata Group also comprises a growing platinum group metals business, iron ore projects, recycling facilities and a suite of global technology products, many of which are industry leaders. The Group's operations and projects span 20 countries.

ABOUT XSTRATA COPPER

Xstrata Copper is the fourth largest global copper producer with attributable mined production in 2010 of 913,500 tonnes of copper in cathodes and concentrates. The company is also one of the world's largest producers of smelter and refined copper, including from third party materials.

¹ Source: Exco Resources Ltd. Press release dated 7 April 2010. See Exco Resources Ltd website.

Headquartered in Brisbane, Xstrata Copper is one of the commodity business units within the major global diversified mining group Xstrata plc. Its mining and metallurgical operations and development projects span eight countries: Argentina, Australia, Canada, Chile, Peru, the Philippines, Papua New Guinea and the USA. Its operations and projects are administered through a regional divisional management structure, which ensures that critical decisions are taken close to the related businesses. It also has a recycling business (Xstrata Recycling) with plants in the United States and offices in Canada and Asia.

ABOUT ERNEST HENRY MINING (EHM)

Ernest Henry Mine, 38 kilometres north east of Cloncurry in north west Queensland, began commercial production in 1998 as an open pit copper mine. Mined ore is processed at a concentrator on-site at the rate of 11 million tonnes per annum (mtpa). Copper concentrate containing gold is trucked 157 kilometres to Mount Isa for smelting to anode, and the anode is then railed to Townsville for refining to cathode at Xstrata Copper's refinery.

In 2010, EHM produced 74,595 tonnes of copper in concentrate and 91,259 ounces of gold in concentrate. EHM concentrate usually represents around 30% of Xstrata Copper North Queensland's total production. The University of Queensland's Centre for Social Responsibility in Mining (CSR/M) found in 2007 that Ernest Henry Mining was responsible for over 30% of Cloncurry's economic activity.

The EHM open pit was based on an optimised pit design to recover as much as is economically possible of the copper-gold ore body. The design had seven stages of development with mining commencing in 1996 and scheduled to be complete in 2011. Processing of mined open pit ore will be completed in 2012.

On 3 December 2009, Xstrata Copper announced corporate approval of a A\$589 million development to extend the life of EHM to at least 2024 through the transformation of open pit mining operations to a major shaft underground mine with an associated magnetite extraction plant. The project will create approximately 330 jobs during construction and 400 permanent jobs from 2013.
